HYDRANT FLUSHING

The Fire Department will be flushing water mains and fire hydrants from September – November. This work will be done as part of the Fire Department's ongoing preventative maintenance program. Generally, this work will be done during the hours of 9AM-4PM, Monday through Friday. Signs will be posted at the end of each street and entranceway to developments the day before flushing begins. We understand and appreciate your efforts in landscaping your property, but remember not to obstruct the hydrants with long grasses and/or shrubs. More information concerning dirty water is posted on the Fire Department Webpage. When hydrant flushing occurs in your community, you may experience temporary water pressure reduction and discoloration of water. Check your cold water tap for discoloration prior to use. If the water is discolored, simply run the cold water for three to five minutes to allow new water to enter your pipes. If the water is still discolored, wait a few more minutes and run the water again. The temporary discoloration only affects the appearance of the water – it DOES NOT affect the safety or quality. While the water is safe to drink, you should avoid washing laundry during scheduled flushing times, as the flushed sediment could discolor white or light-colored clothing. Wait until the water runs clear at the tap, then wash a load of dark clothes first. You should also avoid using hot water until the cold water runs clear. If you experience discoloration for more than 8 hours, or if you experience a significant or prolonged loss of water pressure after hydrant flushing, please call our Water Emergency Line at 216-664-3060.

SERVICE DEPARTMENT

PLEASE REMEMBER TO PROPERLY DISPOSE YOUR HAZARDOUS HOUSEHOLD WASTE! There has been an increase in hazardous household waste being improperly dropped off at the Broadview Heights Service Garage. Please note that certain items cannot be left at the Service Garage for disposal. Please go to the below links for more information on how to properly dispose of many of these hazardous items. For questions, please call the Service Department at 440-717-4022.

SANITARY SEWER ISSUES – FLUSHABLE WIPES: Over the past few years we have experienced escalating issues in our sanitary sewer system caused by unsuitable materials being flushed down toilets. The increased use of “flushable” wipes has caused major clogging issues in the pump stations and, in some cases, house lateral lines. Even though the box states that they are flushable, they do not degrade quickly enough and accumulate to clog the pumps and pipes. **Please do not flush anything except toilet paper!** Thank you for your cooperation.

REMINDER: Disposal of pet waste into catch basins is not an acceptable method of disposal. Pet waste can contain bacteria that threaten the health of animals and people, especially children. Pet waste also contains nutrients that encourage excess weed and algae growth. This water then becomes cloudy and green — unattractive for swimming, boating and fishing. Excess nutrients are a major cause of water quality decline. When pet waste is washed into lakes and streams, the waste decays, using up oxygen and sometimes releasing ammonia. Low oxygen levels and ammonia combined with warm temperatures can kill fish and other aquatic life. Please dispose of pet waste properly by carrying disposable bags while walking your dog to pick up and dispose of the waste.
