

Curbing the Consequences

How Trees are Taking Root for Stormwater and Climate Change

THURSDAY, MARCH 25TH

6:30 PM

REGISTER BY MARCH 24TH

Virtual Presentation Featuring:

DAN HERMS

V.P. of RESEARCH and DEVELOPMENT

DAVEY TREE EXPERT COMPANY

Picture provided by Harald Bransch

Many areas of the U.S. are experiencing an increase in the frequency of intense storms, heavy precipitation events, and associated flooding. Join us to examine the vital role trees can play in curbing the negative consequences of a changing climate. While all trees "feel the heat," some are experiencing increased stress and mortality in certain areas, yet increased growth in others. Join us for this informative online presentation to learn more about the challenges facing our future forests and some simple strategies you can use to take root for stormwater!
